

Terraform Cheat Sheet

Basics

<code>terraform init</code>	<code># Initialize</code>
<code>terraform plan</code>	<code># Preview changes</code>
<code>terraform apply</code>	<code># Apply changes</code>
<code>terraform destroy</code>	<code># Destroy infra</code>

Workflow

1. Write `.tf` file (infra definition).
2. Run `terraform init`.
3. Run `terraform plan`.
4. Run `terraform apply`.

Example (AWS EC2):

```
provider "aws" {  
    region = "ap-south-1"  
}  
  
resource "aws_instance" "dev" {  
    ami           = "ami-12345"  
    instance_type = "t2.micro"  
}
```
