Basics

```
kubectl version

kubectl get nodes

kubectl get pods

kubectl get services

kubectl get deployments
```

Pods

```
kubectl run nginx --image=nginx

kubectl describe pod pod-name

kubectl delete pod pod-name
```

Deployments

```
kubectl create deployment myapp --image=nginx

kubectl scale deployment myapp --replicas=3

kubectl rollout status deployment/myapp

kubectl delete deployment myapp
```

Services

```
kubectl expose deployment myapp --type=NodePort --port=80

kubectl get svc
```
